

Koestler, The Ghost: the machine.

File 10... a

K 25

272. De Jern Clark: Louisi's brain did not enlarge significantly before beginning of Pleistocene; in middle of Pleistocene (c. 1/2 mill years). development of brain in Pleistocene = explosive evolution.  
(Advancement of science, Sept. 1961 Lond.)

273. J. Henrick, The Evolution of Human Nature, p. 434-316...  
against view that human limbic cortex took hold out of animal control.

273 1/2 P. MacLean, Dissecting the old and new cortex  
of the fore-brain & mind.  
MacLean, Comparative function of limbic & neo-cortical brain, 1948 systems of the brain in their relevance to Psycho-physiological aspects of Medicine No. 7. / Medicine vol. XLV, 24, 611-26 6c Edn 1958

274. Well into 18th cent. medical prof. adhered to Galen's doctrine that thoughts <sup>concepts</sup> in brain, feelings emotions & vessels of the body.

275. Viscera can talk by p. Kalamun

277. MacLean, Old brain, little change for mouse & man.

Koestler

276 James-Lange: emotion nothing but visceral reaction.

" against W. Cannon. (Cannon-Bard theory)  
physical basis of emotion is related to the cerebral mechanism in the hyp. thalamus & forebrain.  
regarded bodily changes as expressions rather than causes of emotional feelings.

277 P. Maclean. (Man as his animal brains in  
Modern Medicine 95-106. 3.2.64.)

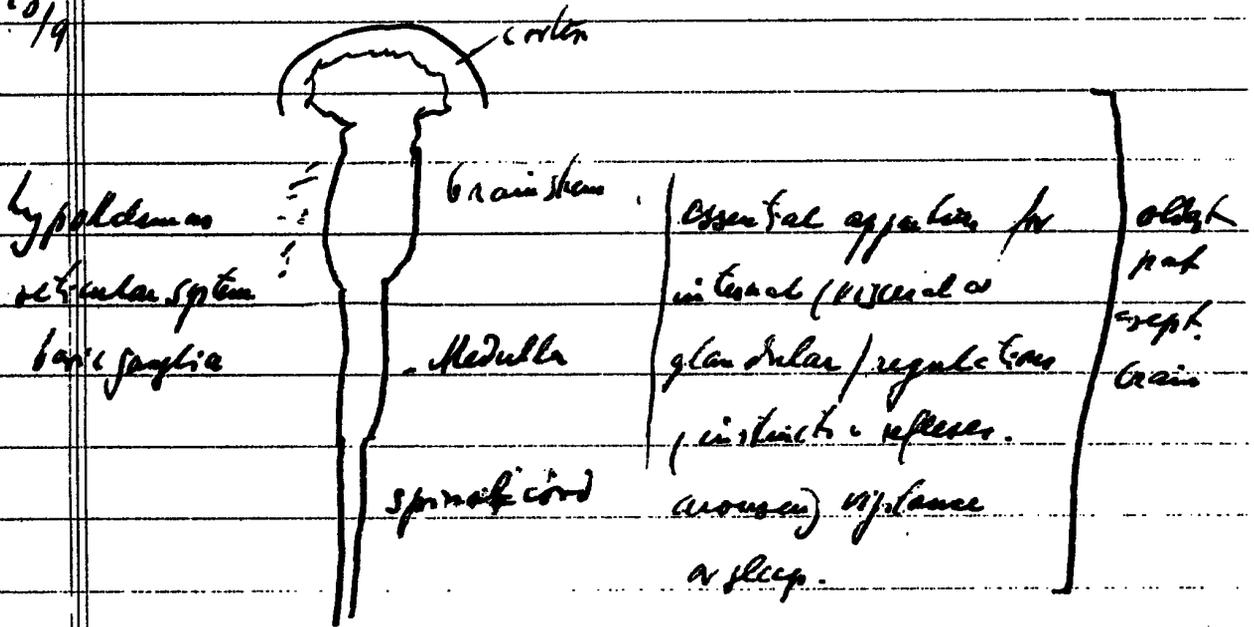

- 3 brains: 1) Reptilian brain
- 2) Lower mammalian brain (emotional behavior)
- 3) Neocortex for learning, all approaches & solutions & problems of immediate experience - but no capacity to put it's feelings in words.

Man's limbic system more highly structured than that of lower animals, but its core of emotion, clarity etc are very primitive.

278/9

cortex begins with reptiles

" = surface layer of cerebral hemispheres but part of of the brain stem. as fold around it like a cloak.

27 | human cortex 1/10 inch thick 10 billion neurons

cortex has 3 basic subdivisions

neocortex	-	neomathia
meso-	-	palaeo-
meso c.	-	reptilian
archicortex	-	

limbic system = old brain (rept + primate-mammalian)  
 neocortical system = new brain

282 | J. Herich; no seat of conscious ness - but apparatus with power to conscious ness - awareness as such is not located in any particular part of mechanism in evolution of Human in lecture 1961

Koestler.

nav

282 Limbic system In sensory cortex: mouth & anal  
genital region on opposite ends. In lower mammals.

As limbic system is bound up or itself  
in order to afford the defactory sense some  
participation in both oral & anal-genital  
functions. (Klüver-Bucy syndrome, infantile  
amnesia, P. Spence, New findings)

relevant to the evolution of psychomotor  
functions of the brain, J. J. Klerman &  
Mental Disease, Vol. 135, 4, Oct. 1962

G.A. Miller, E. Galanter, & K.H. Pribram, Plans  
and the Structure of Behavior, NY 1960.

288 Old brain not merely concerned with affect, it also  
perceives, remembers & thinks in its own  
quasi-independent ways. (primitive, infantile)

289 Neocortex: old brain = many qualities of the  
unconscious id. - lacks the help or control  
of the neo cortex. Neuman, 1953?

289. irrational help roots in emotion = (strong) will me;  
visceral - dominating old brain. (rational  
help for: the problem & manipulation of public  
opinion in neo cortex)

290 Neo cortex - detached, rational thought, capable  
reception. - but both use only these 2 types of  
mentation - in between several ~~more~~ method, perception,  
old - not least most interest

Koestler.

, Not findings relevant to the evolution. 1962

290/ Has clear distinction on behavior self preservation  
of *premarita* / species.

a) *Lower* - *Lower* case, *Lower*  
half of *h. m. s. sept.*

b) upper case of young, grooming, birds,  
friendly social beh's among more keep

re. Neuropsychol. Elyte.

Koestler assumes that Leo Haygen has did not  
use make full use of his brain, & he modern  
man does.

It seems to operate in tree: primitive man  
or pre-Leo Haygen man had to use his brain  
more, because he had no additional help of  
writing, gadgets, institutions. He had to remember  
additional knowledge, & to observe all by himself  
psychology of the brain, i.e. distancing, awareness,  
etc etc - Leo Haygen Einstein. - Growth of  
neurons.

Alan Turing: use his brain little. He has little  
activity: thinking, seeing machines, is possible,  
does not come of thing. His neurons do not  
grow.
