

File 17-2

90

Montagu.

M10

- ✓ 34. Peaceful societies
- ✓ 47. Rob with more spec. sm-t. Kill each other.
- ✓ 49. no malice in predatory attacks.
- ✓ 37. Rob less ag. than more spec.
- ✓ 19/50. no animal displays sadism.
- ✓ 51/52 (Lorenz) ag not necessarily evil - but evil because inhibited for original function - Hobbes; quarrels with this.
- ✓ 52 Lorenz. malice knowledge about birds
little reaction in related fields
his ideas preclude them.
- ✓ 53. Montagu (L. Anselm) different to Lorenz. Without stimulation of brain animal is peaceful. In inhibitory areas balance stimulating areas. 5th Stimulation for the entire upsets balance. We have mechanism for magnifying upsets balance but no mechanism for building up first stimulation for it then.
- ✓ 54 Lorenz missed recent findings in animal behavior:
Balance destruction in under some conditions of social organization
often only " peaceful or cooperative " " " organization.
- ✓ 56 Territorial only in higher animals (spotted), in primates many cases with no real territory.
- ✓ 59. Spence first to ag. instinct as major factor in man's evolution.
- ✓ 60. Man - danger to himself.
- ✓ 61a Recent research on human beh. → social potentials arising from plasticity.

✓ 14. Summary, 1st question not really behavior in lower animal applicable to man
1 1 1 in the 2nd collection to be reviewed

See Montagu

23

- ✓ 78. No proof for australopithecine ancestor
long been accepted that early man was a carnivorous
predator. Among animals only *Killdeer / species c. v. etc.*
- ✓ 167/18 Lack of any defined territorial behavior among nonhuman primates
