

# Information Literacy in The Netherlands

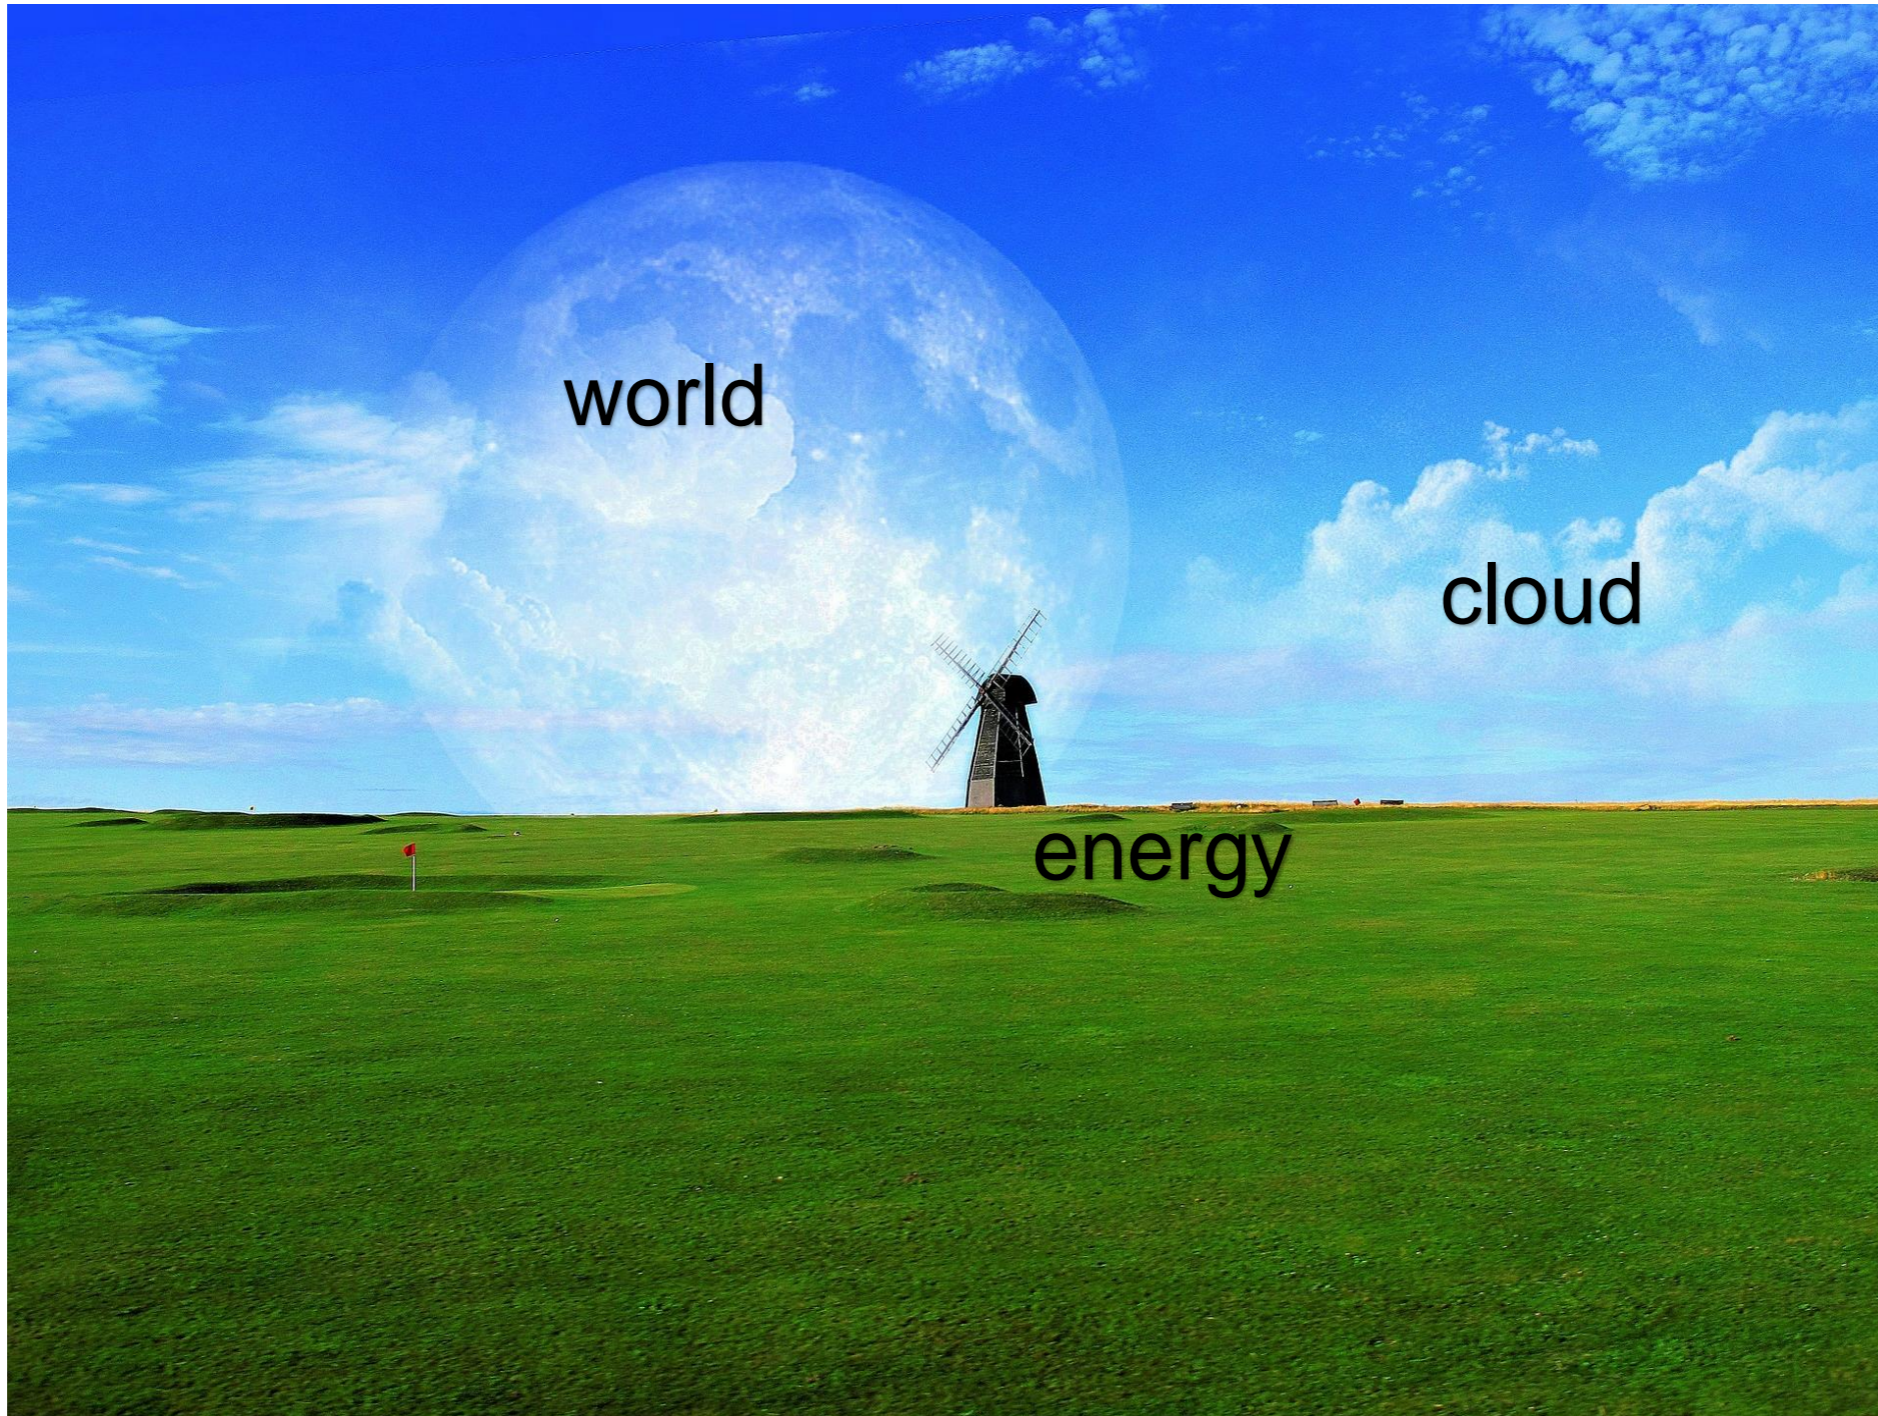

# Introduction:

**Monique Schoutsen**

Radboud University (Nijmegen)

m.schoutsen@ubn.ru.nl

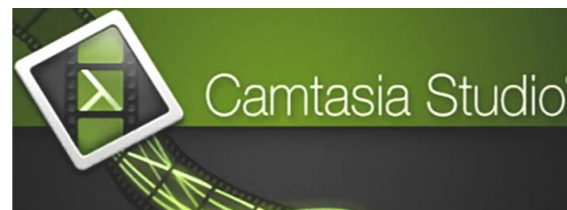

# Keywords: open and online

# Fully adopting blended and e-learning

# Using mainly:

# Topics (the usual):

- Searching, finding and evaluating sources
- How to use our databases
- Referencing

# And some new topics:

- Research data management
- Personal data management & privacy
- Open Access

# Investigating a new and upcoming field:

# Support of Open Educational Resources

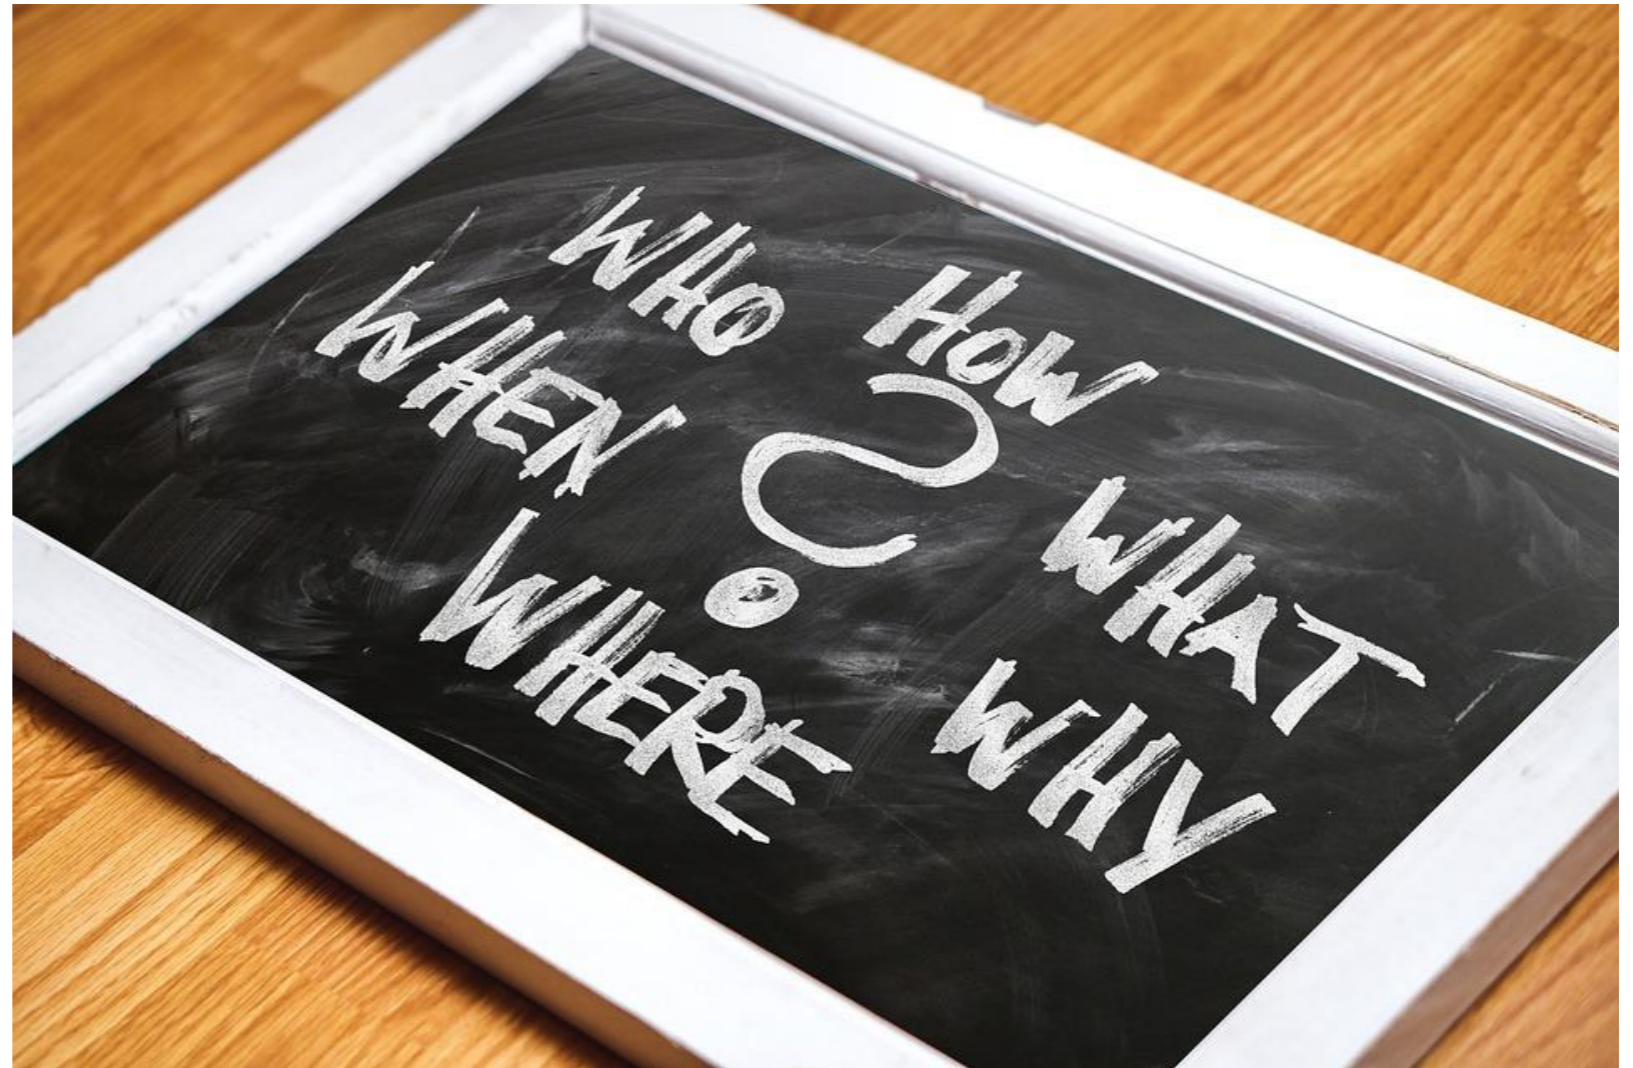

# Introducing a new jobtitle:

**O E R**  
**LIBRARIAN**

# But first a lot of work has to be done:

- Exploring the field of OER: Which support is needed?
- Defining our role
- Looking into the mirror!

# Nationwide OER (librarians)group

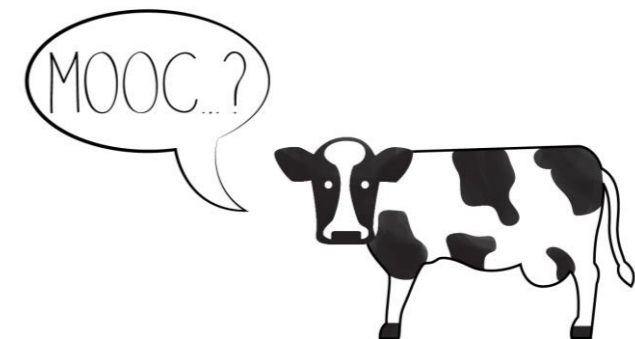

- 35 members (all university libraries) (started 2015)
- 3 Topics/ groups:
  1. Inventarisation: Which support do/ can we deliver?
  2. Marketing – knowledge sharing
  3. Our own Information Literacy OER practices (mirror)

# Questionnaire OER support

What services do we already offer in The Netherlands?

- Advice on copyright (all)
- Repositories (not mandatory, not per se by the library) (some)
- Helping with [MOOCs](#) (Delft)
- Making [interactive](#) digital readers (Amsterdam)
- Giving [OER advice](#) on the website (Maastricht)

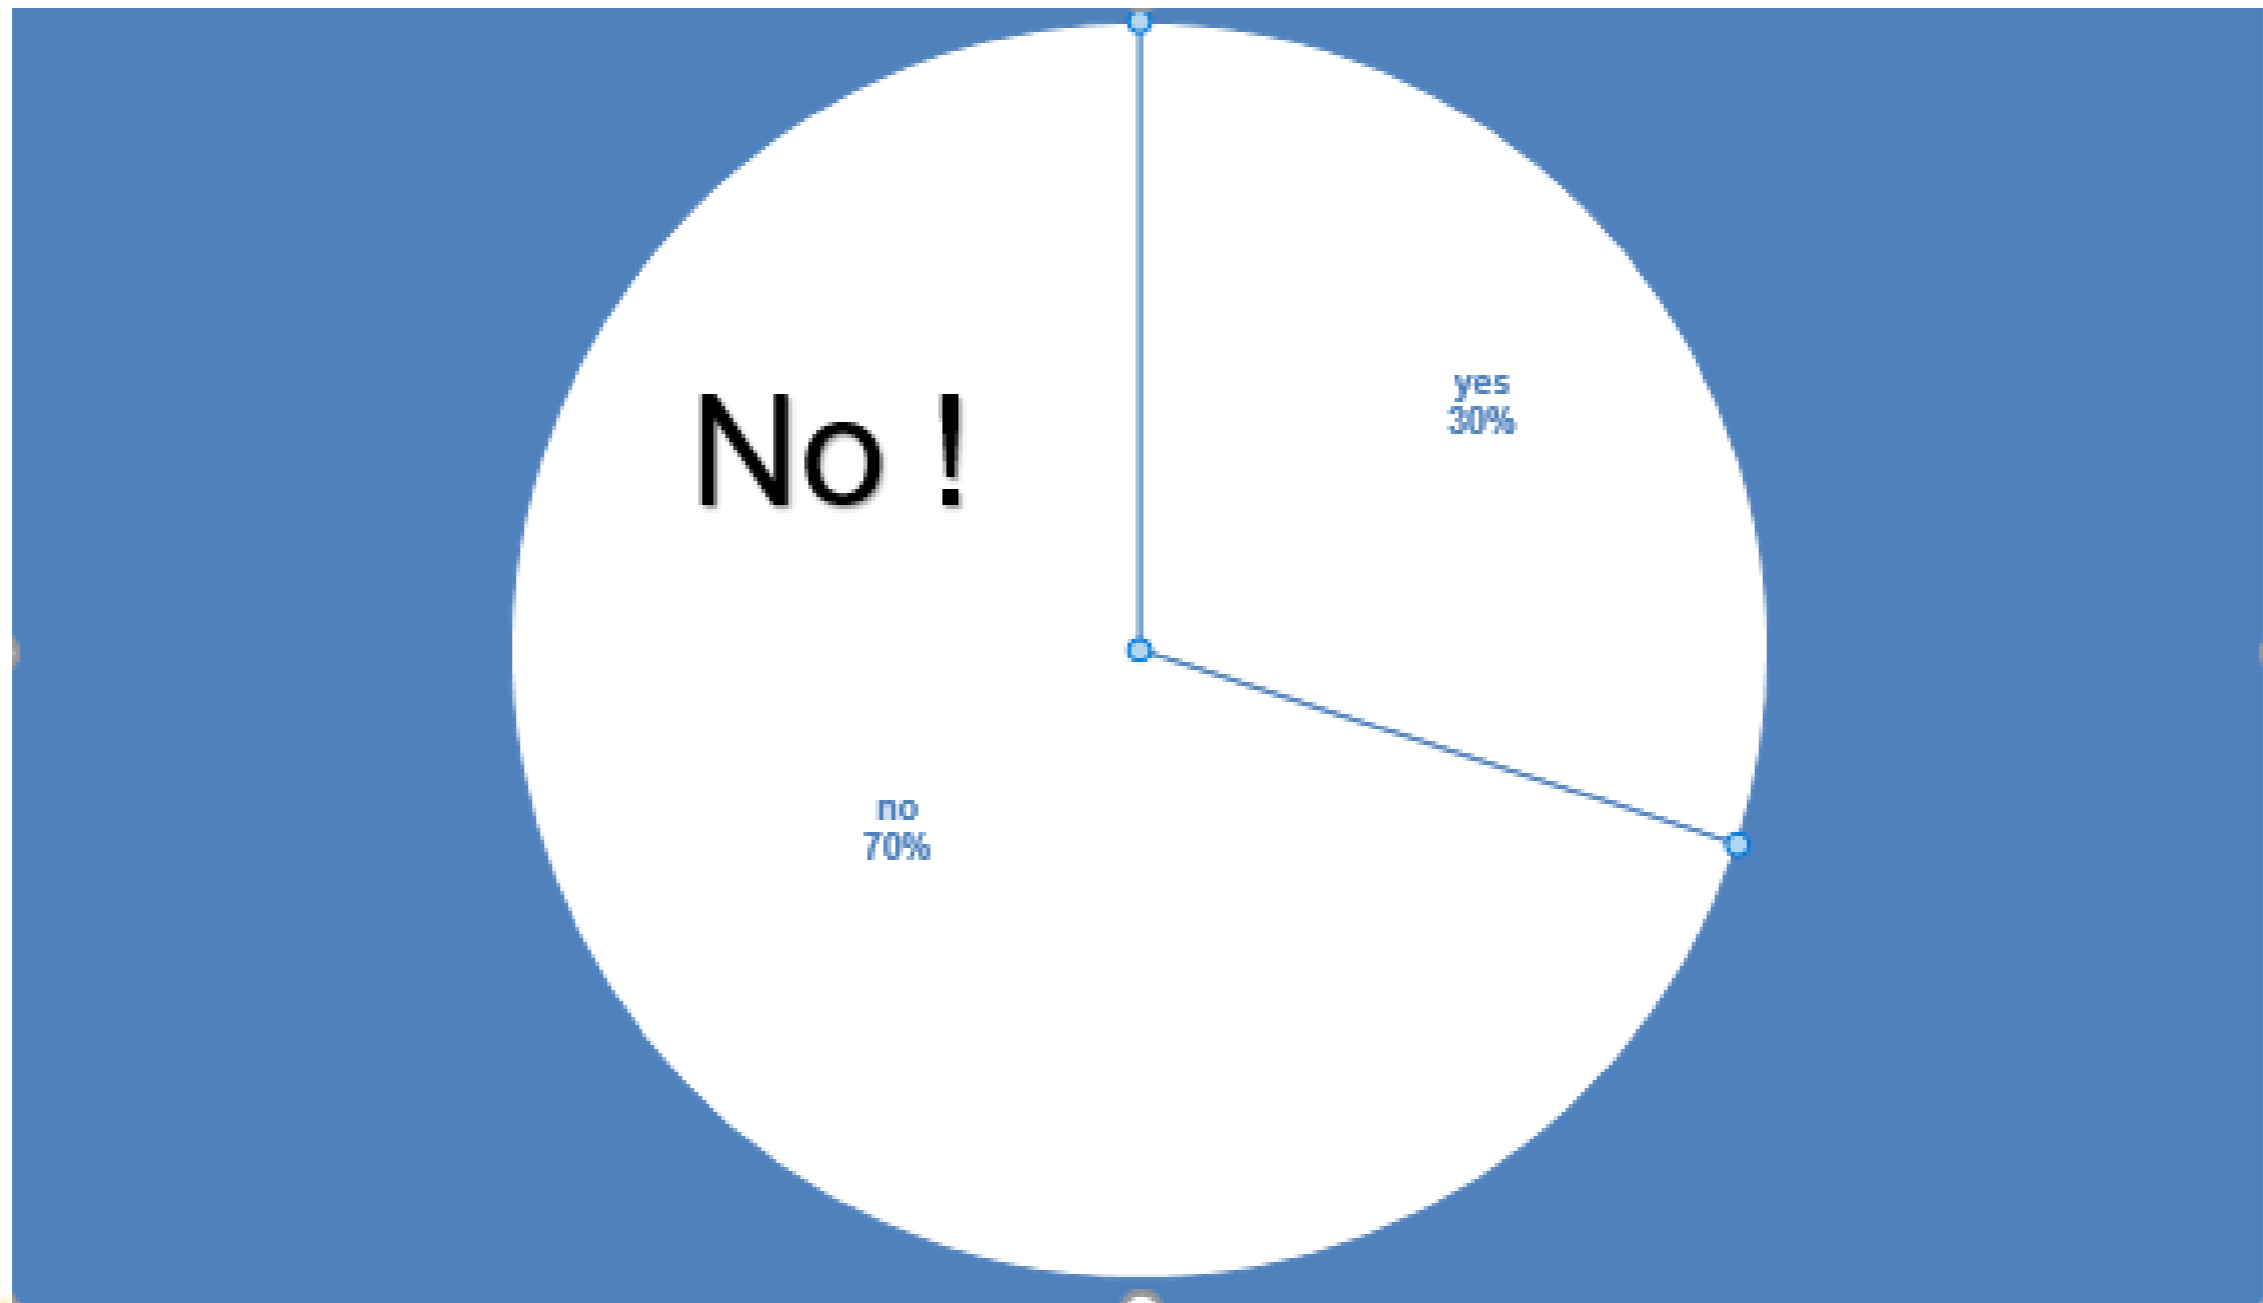

# Marketing: events (mainly OEW)

**“Show your best practice”**

# Are we the good example in open sharing IL?

# Same obstacles as the researchers:

# How do we expand the group of early adaptors?

## Fear of sharing

- Making it easy and fun to share
- Help the teachers with copyright issues
- Support actions like this:

**Let's make  
copyright  
RIGHT  
RIGHT now**  
**For education**

**More time to sign!**

## No clear strategy from the board

At least there is a Statement from the Dutch minister of Education (2016)

**“All Dutch Education material must be open in 2025”**

We can spread the word!

## No infrastructure or education:

Needed:

- Repositories (plus feedback!)
- Education in e.g. copyright

We can organise that!

## No time

Show working together is efficient

We can be the good example (and support)

# So what services can we offer as a library?

- Build repositories
- Explain copyrights (cc licences)
- Copyright clearance
- Adding/ helping to develop metadata
- Explain about OER (making, use and reuse)
- Helping to find OER

# What more can we do? (discussion)

- Signalling new OER content
- Content curation on open courseware (versions)
- Helping to design open courseware
- Evaluate open courseware
- Support in recording knowledge clips
- Making digital readers for the teachers
- Helping with open textbooks
- Giving all kinds of support during MOOCs

# Questions/ suggestions?
